

AUSTRALIAN AND NEW ZEALAND COLLEGE OF VETERINARY SCIENTISTS

MEMBERSHIP GUIDELINES

Veterinary Epidemiology

INTRODUCTION

These Membership Guidelines should be read in conjunction with the *Membership Candidate Handbook*.

The Epidemiology Chapter of the Australian College of Veterinary Scientists was formed to provide a means for accreditation of veterinarians who are trained and accomplished in the discipline of epidemiology, to encourage its application by veterinarians and to foster high standards of training in veterinary epidemiology within Australia and New Zealand.

Members of the Chapter include veterinarians employed in conventional veterinary practice, private consultancy practice (this includes consultancy in Australia and internationally), universities, government departments (including agricultural, food and health portfolios), and research organisations. Chapter members work over diverse areas, including disease, health and production issues in cattle, pigs, poultry, sheep, aquatic species, horses, and other species, including disease and health of humans.

ELIGIBILITY

Refer to Section 2 of the *Membership Candidate Handbook*.

OBJECTIVES

To demonstrate that the candidate has sufficient knowledge of fundamental concepts of epidemiology, and experience in applying these, to be able to give sound advice in this field to veterinary colleagues about the basic principles of application of these concepts.

LEARNING OUTCOMES

The following description of topics and areas serves as a guide to the expected level of knowledge and skills to be demonstrated by the candidate.

1. Investigation of Disease Outbreaks

1.1. The candidate will have **sound¹ knowledge** of investigation of disease outbreaks

1.2. The candidate will be able to do the following with **sound² expertise**:

1.2.1. undertake a structured investigation of a disease outbreak scenario involving a single farm/enterprise/event and on the basis of this investigation present a summary of key findings, hypothesis/es regarding cause/s of the outbreak, and recommendations for disease control and prevention and for further investigation.

1.2.2. critically appraise investigations of several disease outbreaks that involved multiple farms/enterprises/events, and specify with justification the respective strengths and weaknesses of each investigation in terms of attainment of an objective of timely outbreak containment and/or eradication.

1.2.2.1. Essential components to be included in the investigation:

- an explanation of the objectives of various disease outbreak investigations
- case definition
- confirmation that an outbreak is occurring
- epidemic curve
- creation of an epidemic curve from data provided; incorporate curve into a report with interpretation
- spatial distribution
- attack rate table

¹ Knowledge levels:

Detailed knowledge — candidates must be able to demonstrate an in-depth knowledge of the topic including differing points of view and published literature. The highest level of knowledge.

Sound knowledge — candidate must know all of the principles of the topic including some of the finer detail, and be able to identify areas where opinions may diverge. A middle level of knowledge.

Basic knowledge — candidate must know the main points of the topic and the major literature.

² Skill levels:

Detailed expertise — the candidate must be able to perform the technique with a high degree of skill, and have extensive experience in its application. The highest level of proficiency.

Sound expertise — the candidate must be able to perform the technique with a moderate degree of skill, and have moderate experience in its application. A middle level of proficiency.

Basic expertise — the candidate must be able to perform the technique competently in uncomplicated circumstances

- hypothesis formulation
- specification of objective/s for disease control and prevention and further investigation
- definition of trace forward and trace back, and prioritisation of tracing activities.

2. Regional Animal Health Programs

- 2.1. The candidate will have **sound knowledge** of regional animal health programs.
- 2.2. The candidate will be able to do the following with **sound expertise**:
 - 2.2.1. describe in detail the objective/s, structure, components and stages of several animal health programs that seek to control and/or eradicate a specific disease from a defined region, and specify with justification the respective strengths and weaknesses of each program in terms of ability to achieve its stated objective/s given known epidemiology of the disease in the region, available resources and other relevant issues
 - 2.2.2. clearly elucidate the differences between control and eradication programs
 - 2.2.3. describe the principles to be considered when embarking on a regional/national disease control program
 - 2.2.4. appraise regional/national disease control and eradication programs
 - 2.2.5. describe social, economic and welfare considerations in disease control programs and provide examples.

3. Evidence Evaluation

- 3.1. The candidate will have **sound knowledge** of evidence evaluation.
- 3.2. The candidate will be able to do the following with **sound expertise**:
 - 3.2.1. critically evaluate a standard example of each the following as reported in a peer-reviewed journal (evaluation should include learning outcomes from topics below that refer to epidemiological studies):
 - 3.2.1.1. survey to measure prevalence
 - 3.2.1.2. cross-sectional study
 - 3.2.1.3. case-control study
 - 3.2.1.4. cohort study
 - 3.2.1.5. controlled trial.

4. The Purpose and Scope of Epidemiology:

- 4.1. The candidate will have **sound knowledge** of the purpose and scope of epidemiology.
- 4.2. The candidate will be able to do the following with **sound expertise**:
 - 4.2.1. illustrate common purposes and scope of epidemiology using examples of various applications of epidemiology in animal health.

5. Causation

- 5.1. The candidate will have **sound knowledge** of causation.
- 5.2. The candidate will be able to do the following with **sound expertise**:
 - 5.2.1. describe concepts and models of causality, and provide examples of application of these
 - 5.2.2. describe considerations when making causal inference and provide examples of application of these.

6. Disease Ecology and Strategies for Disease Control

- 6.1. The candidate will have **sound knowledge** of disease ecology and strategies for disease control.
- 6.2. The candidate will be able to do the following with **sound expertise**:
 - 6.2.1. in relation to the occurrence of infectious disease, explain and provide examples of the following concepts:
 - 6.2.1.1. transmission and maintenance of infection in a population of interest
 - 6.2.1.2. methods of spread of disease
 - 6.2.1.3. basic epidemic theory
 - 6.2.1.4. basic reproduction rate (R_0) for infectious diseases
 - 6.2.1.5. herd immunity.
 - 6.2.2. list major strategies used for infectious disease control, and explain how these affect disease frequency in the context of the concepts above.
 - 6.2.3. identify and elucidate the epidemiological features critical to control and prevention of infectious and non-infectious diseases important in Australia or New Zealand selected by the candidate.

7. Measuring Population Health

- 7.1. The candidate will have **sound knowledge** of measuring population health.
- 7.2. The candidate will be able to do the following with **sound expertise**:
 - 7.2.1. calculate and interpret the following measurements from information provided:
 - 7.2.1.1. measures of disease frequency — crude mortality or morbidity, prevalence, attack rate, incidence risk, incidence rate
 - 7.2.1.2. measures of association — odds ratio, relative risk based on attack rate, prevalence ratio, incidence risk ratio, incidence rate ratio
 - 7.2.1.3. measures of effect – attributable risk, attributable fraction, population attributable risk, population attributable fraction
 - 7.2.1.4. measures of production and productivity — provide examples relevant to specific livestock production systems.
 - 7.2.2. describe objectives of standardisation of measures of disease frequency.

8. Application of Diagnostic Tests

- 8.1. The candidate will have **sound knowledge** of application of diagnostic tests and be able to explain the concepts behind the characteristics of diagnostic tests (For example why might a test be very sensitive, or very specific? How applicable are a tests characteristics in a different population?).
- 8.2. The candidate will be able to do the following with **sound expertise**:
 - 8.2.1. calculate and interpret the following measurements from information provided:
 - 8.2.1.1. measures of test validity — specificity, sensitivity
 - 8.2.1.2. measures of prevalence based on test results — apparent prevalence and true prevalence
 - 8.2.1.3. probability of individual status given test results — positive predictive value, negative predictive value.
 - 8.2.2. compare application of diagnostic tests in series and in parallel and give examples of the appropriate application of each approach.
 - 8.2.3. describe effects of prior probability on predictive value and interpret specific examples using these principles including:
 - 8.2.3.1. discussing with justification the characteristics of a diagnostic test/s suitable for use in regional animal disease programs particularly when disease prevalence is moderate-high versus low-zero.

8.2.3.2. explaining how the interpretation of diagnostic test results will change over the course of a regional animal disease program that is aiming to reduce and then eradicate a disease.

8.2.4. define herd-level sensitivity and specificity, and describe major determinants of these.

9. Types of Epidemiological Studies

9.1. The candidate will have **sound knowledge** of types of epidemiological studies.

9.2. The candidate will be able to do the following with **sound expertise**:

9.2.1. Correctly identify examples of each of the following types of epidemiological studies — survey; case report and case series; cross-sectional study; case-control study; cohort study; randomised controlled trial

9.2.2. explain the strengths and weaknesses of the different study types and applicability for particular research objectives and circumstances.

10. Aspects of Epidemiological Study Design

10.1. The candidate will have **sound knowledge** of aspects of epidemiological study design.

10.2. The candidate will be able to do the following with **sound expertise**:

10.2.1. describe major sampling methods, provide and recognise examples of each method, and compare and contrast the respective strengths and weaknesses of each method.

10.2.2. explain the determinants of sample size and how each affects sample size when:

10.2.2.1. estimating a proportion

10.2.2.2. estimating a mean

10.2.2.3. comparing two independent proportions

10.2.2.4. comparing two independent means

10.2.2.5. detecting disease.

10.2.3. appraise a questionnaire for potential introduction of information bias and selection bias, and propose appropriate improvements to reduce potential biases

10.2.4. describe key principles of data management, and recognise examples of inappropriate data management

- 10.2.5. identify examples of potential selection bias, information bias and confounding bias, explain why each identified potential bias may have occurred, discuss the respective impact of each on internal validity and external validity (if applicable), and propose alternate methods for controlling each identified form of potential bias.
- 10.2.6. identify examples of interaction, and interpret results in the presence of interaction.
- 10.3. design of an Epidemiological Study demonstrated by candidate being able to, for a given scenario:
- 10.3.1. outline the essential design features of an appropriate epidemiological study (survey, cross-sectional study, case-control study, cohort study or controlled trial)
- 10.3.2. describe and compare alternate options for essential design features where these exist, and explain justification for choice of particular alternatives.
- 10.3.3. essential features to be included in the outline of the epidemiological study:
- hypothesis formulation
 - setting objective/s
 - choice of study type
 - unit of study
 - target/reference and study populations
 - defining outcome and exposure variables
 - sampling methods
 - sample size estimation
 - design strategies to minimise bias.

11. Description and Analysis of Epidemiological Data

- 11.1. The candidate will have **sound knowledge** of description and analysis of epidemiological data.
- 11.2. The candidate will be able to do the following with **sound expertise**:
- 11.2.1. outline the characteristic features of different data types (binary/dichotomous, nominal, ordinal, continuous (interval and ratio))
- 11.2.2. describe and compare alternate methods for summarising and presenting each data type, and explain justification for preference for particular alternative/s

- 11.2.3. calculate and interpret confidence intervals for common population measures (proportion/prevalence, mean, odds ratio, relative risk based on attack rate, prevalence ratio, incidence risk ratio, incidence rate ratio)
- 11.2.4. explain using examples hypothesis testing, p-values, statistical power, Type I and Type II errors, and interpret specific examples of p-values and statistical power
- 11.2.5. specify with justification the appropriate parametric or non-parametric statistical approaches when comparing two groups with straightforward data types and structures (binary/dichotomous, nominal, ordinal, continuous; independent, paired/dependent)
- 11.2.6. explain the uses and basic concepts of linear regression, logistic regression and survival analysis as tools to analyse data in epidemiological studies, and be able to interpret output from standard examples of each
- 11.2.7. define hierarchical data and clustering, and provide and recognise examples of each.

12. Herd Health and Productivity or Performance ('herd' refers to a group of any domestic animals kept or reared together)

12.1. The candidate will have **sound knowledge** of herd health and productivity or performance.

12.2. The candidate will be able to do the following with **sound expertise**:

- 12.2.1. explain the links between health, productivity or performance and economics for a livestock enterprise
- 12.2.2. explain, using an example, the process involved in investigating unsatisfactory herd productivity or performance
- 12.2.3. for specific types of livestock enterprises, specify relevant health and productivity or performance indices and provide examples of how they are used practically
- 12.2.4. explain how to set and monitor health and productivity targets including critical points for decision making
- 12.2.5. describe and provide examples of quality assurance systems at the herd level
- 12.2.6. describe data collection processes for managing herd health, and provide an example in an industry nominated by the candidate.

13. Surveillance and Monitoring

13.1. The candidate will have **sound knowledge** of surveillance and monitoring.

13.2. The candidate will be able to do the following with **sound expertise**:

- 13.2.1. describe the various functions of monitoring and surveillance
- 13.2.2. explain key considerations when interpreting passively collected incident or prevalence data
- 13.2.3. provide examples of surveillance activities that contribute to early detection, to evaluation of current regional disease control programs, and to demonstration of disease freedom for diseases important in Australia or New Zealand selected by the candidate.
 - 13.2.3.1. In these examples, describe the key components of the monitoring or surveillance activities that contribute to each function.

14. Risk Analysis

- 14.1. The candidate will have **sound knowledge** of risk analysis.
- 14.2. The candidate will be able to do the following with **sound expertise**:
 - 14.2.1. describe the major steps in undertaking a risk analysis
 - 14.2.2. outline the key differences between qualitative, semi - quantitative and quantitative risk analysis and the main strengths and weaknesses of the different approaches
 - 14.2.3. apply the principles of risk analysis to many specific scenarios – regional risk analysis; application of biosecurity to regions/localities/individual enterprises/components within an enterprise.

15. Animal Health Economics

- 15.1. The candidate will have **basic knowledge** of animal health economics.
- 15.2. The candidate will be able to do the following with **basic expertise**:
 - 15.2.1. explain and give examples of the following economic methods/concepts: partial farm budgets, gross margin analysis, decision trees and payoff tables
 - 15.2.2. describe the key steps and relevant concepts in conducting a cost-benefit analysis of an animal health program.

16. Epidemiological Modelling

- 16.1. The candidate will have **basic knowledge** of epidemiological modelling.
- 16.2. The candidate will be able to do the following with **basic expertise**:
 - 16.2.1. outline the key differences between different types of disease spread models (e.g. deterministic, stochastic, mathematical, simulation)
 - 16.2.2. describe the stages in model development and assessment

16.2.3. describe the strengths and weaknesses of commonly used epidemiological models for particular purposes

16.2.4. provide examples of applications of commonly used epidemiological models and explain the purposes of these models.

17. Spatial Epidemiology

17.1. The candidate will have **basic knowledge** of spatial epidemiology.

17.2. The candidate will be able to do the following with **basic expertise**:

17.2.1. describe the components of a geographic information system (GIS)

17.2.2. describe several applications of GIS for epidemiological purposes.

EXAMINATIONS

For information on both the required standard and format for the Written and Oral examinations, candidates are referred to the *Membership Candidates Handbook*. The Membership examination has **two separate, components**:

1. Written Examination (*Component 1*)

Written Paper 1 (two hours): Principles of the Subject

Written Paper 2 (two hours): Applied Aspects of the Subject

2. Oral Examination (*Component 2*)

Oral (one hour)

The written examination will comprise of two separate two-hour written papers taken on the same day. There will be an additional 15 minutes perusal time for each paper, during which no writing is permitted in the official exam booklets but is permitted on the exam paper and on scrap paper provided by the exam supervisor. For paper 1, you are provided with eight (8) questions to answer, worth 15 marks each, giving a total of 120 marks for the paper. For paper 2, you are provided with three (3) questions to answer, worth 40 marks each, giving a total of 120 marks for the paper. There is no choice of questions. Questions may be long essay type or a series of shorter answer sub-questions. Marks allocated to each question and to each subsection of each question will be clearly indicated on the written paper. **Non-programmable calculators should be taken to the examination room for both written papers.**

Written Paper 1:

This paper is designed to test the candidate's knowledge of the principles of Veterinary Epidemiology as described in the Learning Outcomes listed above. Answers may include specific examples to which the general principles apply, but should primarily address the theoretical basis underlying each example.

Written Paper 2:

This paper is designed to (a) test the candidate's ability to apply the principles of Veterinary Epidemiology to particular cases/problems or tasks and (b) test the candidate's familiarity with the current practices and current issues that arise from activities within the discipline of Veterinary Epidemiology in Australia and New Zealand.

Oral Examination:

This examination further tests the candidate's achievement of the Learning Outcomes.

Question material will be delivered verbally or with the use of an audio-visual presentation of scenarios, or written presentation of epidemiological reports/articles.

The candidate will deliver their response to the question with an oral explanation or whiteboard/paper presentation of concepts. The duration of this examination is approximately one (1) hour. Four cases/problems or tasks are presented with each case allocated 25 marks providing a total of 100 marks.

RECOMMENDED READING LIST

The candidate is expected to read widely within the discipline, paying particular attention to areas not part of their normal work experiences. This list of books and journals is intended to guide the candidate to some core references and other source material. Candidates also should be guided by their mentors. *The list is not comprehensive and is not intended as an indicator of the content of the examination.*
